

Manlift Training Kelowna

Manlift Training Kelowna - Different manlift training programs include the review and content of manlift devices. An important portion of the program is the practicum where students show their knowledge and practical ability to operate the manlift safely. A requirement to Manlift training is the fall protection training, that can be included in the training based on the particular needs of the client.

Course Content

The program consists of the following areas of instruction: the effect of doing unsafe acts or operating unsafe machine, pre-shift machine check and work area survey requirements, Lifting device equipment definitions, Review of load capabilities, safety decals and particular machine requirements, Review of related sections of the OSHA Standards and the CSA Standards and Review site specific Dangers, along with controls for safely utilizing a lifting device.

Demonstration and Evaluation Content

Demonstration and evaluation content comprises: Proper personal protective equipment or also known as P.P.E. as needed; Using a signaler or a spotter when needed; using a lift just on level and solid ground; Using the proper fitting harness or fall arrest device; Operating the lift with all other staff clear of the job site; Aware of load restrictions etc. and other specs as set out by the manufacturer; Pre-shift work area survey and equipment check; Having all associated machinery safely stored on the lift platform; Isolating off the work place when major work projects are to be done; and ensuring a safe and smooth operating speed for various plant conditions

Each of the trainees would undergo testing to make certain that they are able to safely operate their machinery.

Manlift Safety

Since the manlift is capable of lifting personnel and materials more than 20 feet in the air, these equipment pose a particular amount of risk and could be dangerous equipment if not used correctly. Since the danger is so apparent, lift owners and operators are careful to properly maintain their machines and follow right safety precautions and operating procedures. The ratio of accidents involving this specific machine is fairly low.

The safety specifications for scissor lifts and boom lifts puts the burden for safe manlift operation on the user. You are responsible for understanding how to safely use the lift even if you just rent the machine for one day. The most basic safety features on the machine are safety decals and the operating manual. These show vital information about the maintenance, operating procedures and safety machinery.

A new model of manlift will come with the necessary decals in place and operating manuals. The operating guidebook should be found on the machinery at all times. If you are buying a used lift, it is important to ensure that the handbook is included and that vital decals haven't been painted over. The restraints that prevent operators from falling and the guardrails are other important safety features. These are mandatory and standard on all types of lifts.
