Manlift Ticket Kelowna

Manlift Ticket Kelowna - The Manlifts and Elevated Platforms program offers training on the rules, regulations and right application of safe operating measures and work practices involved in daily activities for people who work using this machine. The course has been designed for people who are actively involved in these activities or those who have a basic understanding of this machinery.

During the past couple of decades, aerial platforms and manlifts have become a common sight in industrial maintenance applications and on construction job sites. These equipment provide an easy way to lift employees close to what must be performed on a stable platform apparatus, enabling employees to carry out tasks with greater comfort and safety rather than being perched on top of ladders or scaffoldings.

The manlift is like other industrial tools in that they are safe if utilized correctly. Because they lift staff above ground level or floor, accidents could easily occur and this may result in serious death or injuries for both the operators of the manlift and any passerby who might be unlucky enough to be standing below.

Manlifts come in different types. Nearly all fit into 1 or 2 categories: the scissor lift, which is capable of moving upward and downward and the articulating boom lift, which could move both vertically and horizontally.
