Counterbalance Forklift Training Kelowna

Counterbalance Forklift Training Kelowna - Counterbalance Forklift Training courses are always in high demand. The Counterbalance forklift is a forklift that is made together with a weight that counters the balance, evenly spreading the load's weight across the arms of the forklift. Counterbalance forklifts are made so the weight on the lift is counterbalanced by the weight behind the centre of gravity. The load is projected out from the machine's front so it is visible to the operator of the forklift. This particular kind of forklift truck should just be used on prepared surface or on level, stable ground.

Training is required for forklift drivers to understand the correct method to spread the load equally across the forklift arms. Trainees will learn how to lower and raise the load vertically and how to tilt the forklift mast both forwards and backwards between 5 and 15 degrees. Individuals training would learn the RTITB standards required for safely operating the forklift. Individuals training would also become familiar with the kinds of attachments for the forklift arms.

Kinds of Counterbalance Forklifts:

Walkie Pallet Trucks
Walkie Pallet Truck is a counterbalance forklift suitable for getting into spaces which are cramped and small. This particular lift is highly maneuverable and can access virtually whatever tight space.

Walkie Stackers
The Walkie Stacker is a different forklift that differs somewhat form the Walkie Pallet truck in terms of its lift height. This equipment is designed to access tighter spaces and has extra lift capabilities for high stacking. Neither of the Walkie line of lifts can be ridden. The operator has to walk behind them.

Rider Pallet Trucks
The Rider Pallet Truck is made so the driver can ride it. These riding lifts are perfect for dock unloading and loading.

Wave Work Assist Vehicle
The Wave Work Assist Vehicle is a counterbalance forklift intended to reach great heights of up to 17 feet.

Sit Down Counter Balanced Trucks
Sit Down Counterbalanced Trucks include four-wheel and three-wheel forklift designs. These tough and durable trucks are designed to be ridden.
