The U.S. forklift division stationed in Cleveland has a skilled team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

Start-up of the forklift business

Korea's original home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled forklifts as part of a nationwide equipment expansion venture. Early product sales of this industrialized equipment focused on large business communities, the armed services and on state-run firms. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical instruction grew to become the new focus for enhancing quality and product development.

Forklift Export Expansion

Daewoo started the first home-based lift truck business in 1967, and rapidly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a situation of substantial expansion of their forklift operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to counter act competitive pressures in the US materials handling industry. This venture radically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a contemporary plant which helped set up the company for the fabrication of high added-value goods suitable for export. In 1993, the corporation had a global sales network and started exporting models they had established through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into international marketplaces.
